

## 1 Introduction

Economics has never been about empowering the people. Neither has it ever been about sustainability. In fact, 'sustainable immobility' is an oxymoron. The transition from migratory culture to the city-state removed sustainability as a constraint on human population size. No longer dependent on natural ecosystems and th mobility that formed the only means of having food to eat throughout the year, the city-state defines civilized life as a form of unsustainable immobility thatapplies equally the same today.

## 2 Introducing 21st Century Distribution

The central enabling idea of this proposal is a technical method for materializing trust relationships.

- De-coupling distribution from "connections."
- Re-invigorate local economies by removing distributor fees and transportation costs.
- Materializes the trust shared between two entities.
